# Tetrahedral meshes

To create more complex meshes one can use also tetrahedral mesh, which can be obtained (with one intermediate step) from 3D modeling software, like [Blender](#). Software tools for 3D modeling usually do not provide mesh itself, however they can save some files, e.g. in STL format that can be directly used for mesh generation. Then, a mesh generating software is used, like [Tetgen](#).

---

*Sample parameter file:* [point source](#).

A 200x200x200 computational domain with single point source and a metallic sphere made of a perfect electric conductor.
